extreme_decile_aggressive

equity strategy | family: equity-aggressive | status: research | derived from `extreme_decile`

What this strategy does

extreme_decile re-sized for return: base unit 0.009, 6x leverage cap

Why it should work. Analysts and investors under-react to earnings news, so stocks with the most positive surprise keep drifting up and the most negative keep drifting down for weeks.

Design notes (from the strategy's source file).

Aggressive-sizing variants of the hand-built equity strategies.

Same signal, trim, tilt and neutralization as each base strategy; only the two dials that set how big and how levered the book is change (base_unit_fraction, gross-leverage cap = 6x). The multiplier for each was picked by sweeping 1.5x..12x the original base unit and taking the highest return subject to Sharpe >= 0.6 and max drawdown >= -40% (a worse drawdown is a fund-ending event, not a risk preference). The untouched 5%-of-ADV liquidity cap remains the real capacity constraint, and bites roughly four times as often at this sizing.

These are generated from the base strategy classes, so a change to a base strategy's weights flows through automatically.

parameter	value
base_unit_fraction	0.009
max_gross_leverage	6.0
liquidity_cap_frac	0.05
return_basis	mktadj
cap_mode	proportional
beta_overlay	0.0

Performance

metric	extreme decile aggressive	market (CRSP VW)
Annualized return	9.53%	9.94%
Annualized volatility	12.24%	19.35%
Sharpe (NAV-pct)	0.80	0.59
Sortino	1.15	
Max drawdown	-36.2%	-55.5%
Calmar	0.26	
Final NAV ($10M start)	$58,861,263	
Worst day	-6.52%	
% positive days	51.5%	
Sharpe 1996-2001	1.02	

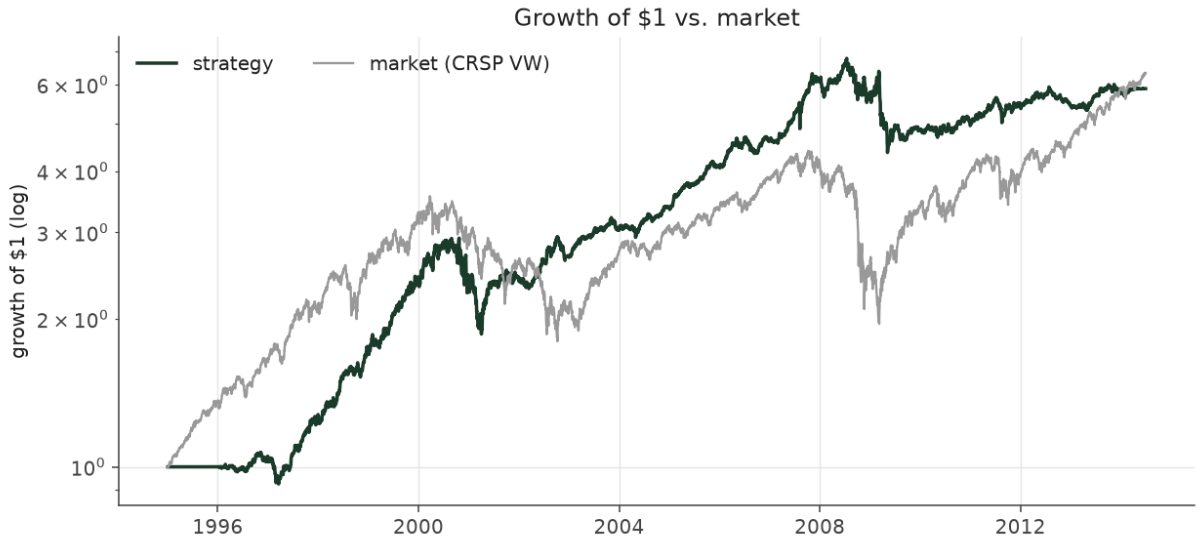

Sharpe 2002-2007	1.72	
Sharpe 2008-2013	-0.01	

Correlation of daily returns with the market: **0.08**.

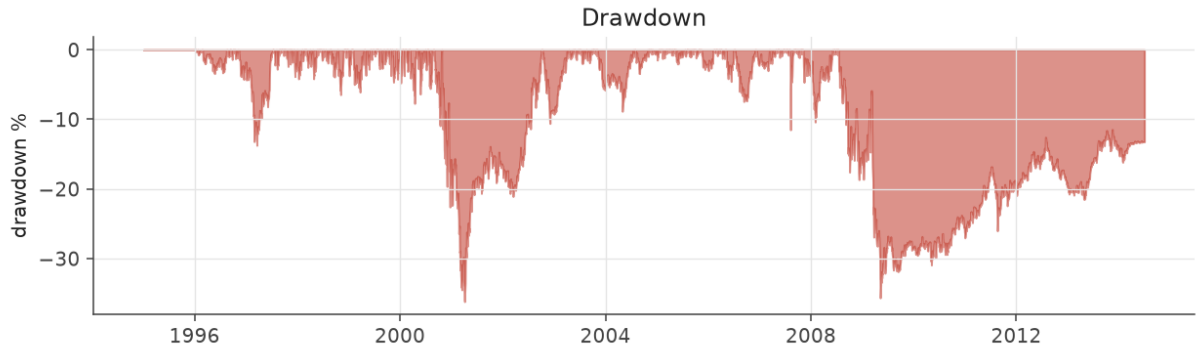

• best Sharpe among equity: `s10_vol_rank_tilt` (1.81); this one: 0.805

• best return among equity: `s6_beta_overlay_aggressive` (0.15); this one: 0.0953

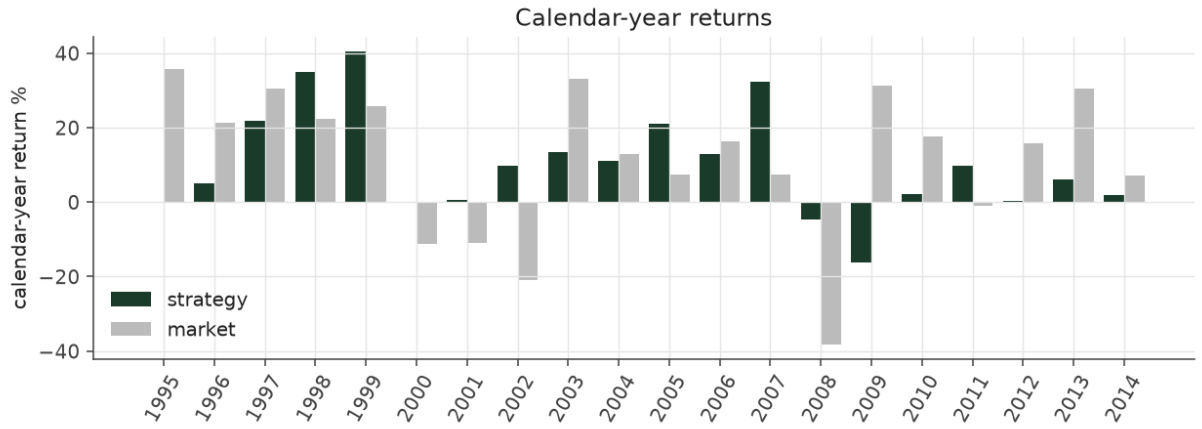

• best Calmar among equity: `s10_vol_rank_tilt` (0.614); this one: 0.263

NAV (log scale)

Drawdown from running peak

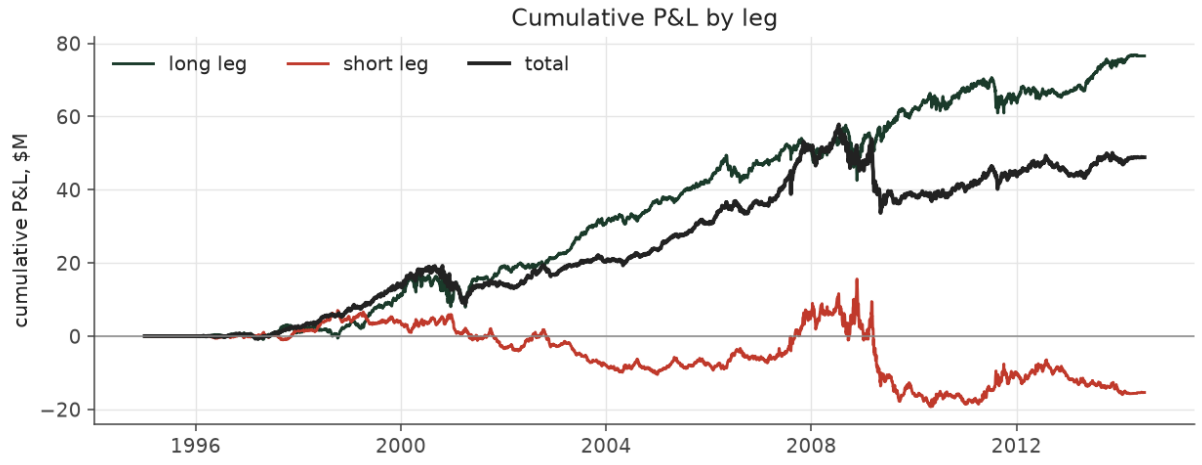

Calendar-year returns

Is the edge stable, or concentrated in a few years?

Where the return comes from

Long leg vs. short leg vs. total

	long leg	short leg
P&L ($M, before costs)	76.54	-15.40
P&L after costs ($M)	70.06	-21.19
of which common (average-event) component ($M)	60.16	-44.74

of which excess / PEAD component ($M)	16.39	29.34
excess minus costs ($M)	9.90	23.55
gross return per $ traded (bp)	180.78	-45.06
positions in the money (hit rate)	0.57	0.49
stand-alone Sharpe (leg only)	0.90	-0.11

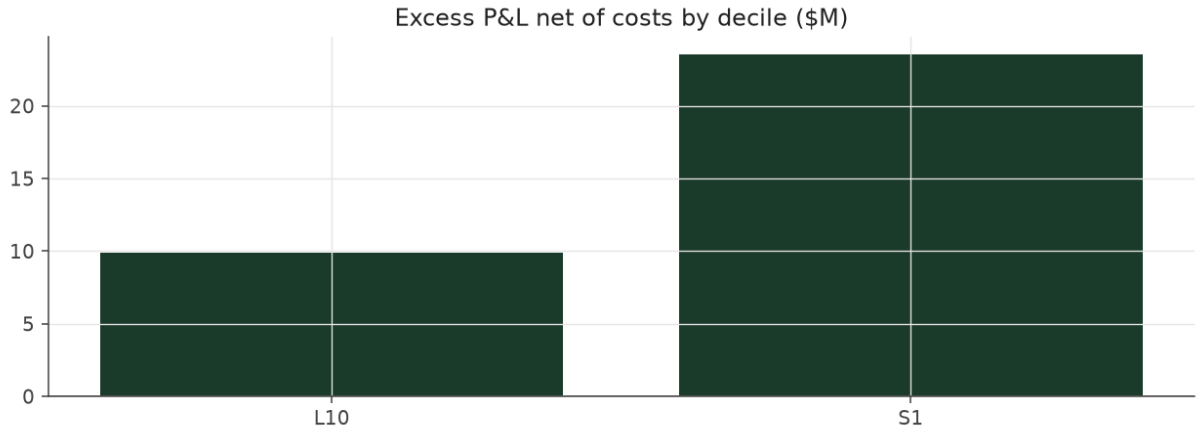

Daily P&L correlation between the two legs: **-0.58**.

• **The short leg loses money in absolute terms** (-15.4M before costs) while the long leg earns +76.5M. That is mostly a benchmark effect, not a signal failure: the average earnings-event stock beat the cap-weighted market during its holding window, which flatters the long leg and hurts the short leg by 60.2M / 44.7M. Stripping that common component, the surprise signal itself earned +16.4M on the long side and +29.3M on the short side.

• The two legs' daily P&L are -0.58 correlated: the short leg is the hedge that makes the long leg's variance disappear (stand-alone leg Sharpe 0.90 long / -0.11 short vs 0.80 combined).

By decile and side (signal-driven part only)

leg	decile	positions	notional M	net pnl M	excess M	cost M	alpha net M	alpha share	alpha bp per $
long	10	17,174	4,234.01	70.06	16.39	6.49	9.90	29.6%	23.38
short	1	17,169	3,417.04	-21.20	29.34	5.80	23.55	70.4%	68.91

D10 and the short deciles carry the alpha; the middle of each leg earns little

By size quintile (1 = smallest)

size quintile	positions	notional M	net pnl M	excess M	cost M	alpha net M	alpha share	alpha bp per $

Short-borrow sensitivity (not modeled in the backtest)

borrow rate	fee M	ann. return	drag
0.0%	0.0	9.53%	0.00%
0.5%	3.6	9.17%	0.36%
1.0%	7.3	8.79%	0.74%
2.0%	14.5	7.95%	1.58%
5.0%	36.3	4.28%	5.25%

The engine charges the same transaction cost on shorts as on longs and no stock-borrow fee. The short leg is concentrated in small, illiquid names, where borrow is scarce and expensive -- read the table as a floor on the cost of running the short leg.
